COLOR-CHANGE

- Your doll has a unique water feature and will change color in cold temperature.
- Color change will start at approximately 59°F (15°C), but best results occur if chilled to approximately 32°F (0°C).
- If color change does not work properly or quickly, the temperature of the doll's body may be too close to the temperature of the environment.
- Color change temperatures may vary according to weather conditions.
- The color change effect has a lengthy, but limited lifespan.
- Extreme weather conditions may cause the color change pattern to reveal upon arrival. Place the doll back into room temperature (68-77°F (20-25°C)) for the original color.
